Objectives of the Event	The objective of this webinar is to explore the Epidemiological Anthropology which confers to the determination, manifestation and distribution of certain diseases and disorders in human communities spread all over the globe. To learn about the spectrum of disease causing factors which ranges from genetic to environment. Socio-cultural background which also exhibit Influential role as human settlement pattern enhance the spread of diseases. To find about the biotic and abiotic components of the environment that contribute to ecological aspects of diseases. The epidemiological aspects consider two kinds of diseases namely, infectious and non-infectious. All the Anthropology of epidemics to be understood in the backdrop of Covid 19 situation in the country.
A Brief Description of the Programme	It was a three days programme having invited lectures from the Resource Persons where different thoughts and scientific findings has been shared about the Anthropological Perspective of Epidemics with an emphasis on Covid 19 Situation. We have come up to the idea anthropology to understand to attend to the perspectives of others, recognize variations in forms of societal organization, and bring understanding of how diverse perspectives and forms of organization of one's own and other populations' deeply affect human life and interaction. Anthropology as a discipline that examines the organization of societies—their political and economic institutions and processes, their industry and labor, their system of laws and justice, their system of health care, and their cultures. A culture includes values on which people base their judgments and decisions, their prescriptions and proscriptions for behavior, their beliefs about the world, including ideas about sickness, its causes, its remedies, and the appropriate behavior of patients and healers, including physicians. Anthropology also examines interactions among societies and cultures whose understandings of and prescriptions for sickness often differ. In addition to being an academic discipline, anthropology is also a practice insofar as scholar/practitioners deploy their discipline in the solution of societal and global problems, including problems in public health. We also had technical session on all the 3 days where young Scholars presented their papers and share Research knowledge and ideas on Epidemics and Anthropology.
Outcomes of the Event	By the end of the webinar , participants had a comprehensive understanding on the Epidemics and Anthropology and also thre has been sharing of ideas from different scholars all over th country through their seminar presentation.
Valedictory Session/Vote of Thanks	Vote of thanks was delivered by Ms Farhat Naaz, Assistant professor, HOD, department of Anthropology, Seva Bharati Mahavidyalaya where she congratulated the Resource Persons ,the Principal , Guests, all the technical members and all the members of the college for making the webinar grand success.
