Abstract

Novel corona virus disease (Covid-19) is a serious pandemic disease that occurs predominantly during the month of February, 2020 in India. It is so infectious that can spread rapidly and infect healthy one as it transmitted through human beings. To prevent the pathogens or causative agents, WHO recommended some precautionary measures as there is no medicine to cure the disease caused by novel corona virus. Some medicines are used by physicians to treat various associated diseases in connection with Covid-19. It is urged that to stay safe, many measures may be adopted even self quarantine is utmost recommended. Though the best way to mitigate the problem is 'stay at home' but during wanted movement at outside, people may be affected by the pathogens which is now a fear to all. Therefore, WHO recommended, one can use masks when he or she is outside the home during
